

Meet us at the Expo for a free Peripheral Artery Disease (PAD) screening.

- *Saturday, Nov. 2nd • 9am to 1pm*
- *Wonderfully Made Health and Wellness Expo at North Dallas Community Bible Fellowship*

Peripheral Artery Disease (PAD) Treatment

MTV IR's Arterial Vascular Interventions are minimally invasive procedures used for the evaluation and treatment of severe leg pain due to Peripheral Artery Disease (PAD). Once the problem areas have been identified, MTV IR doctors work with the referring physicians to develop the best treatment plan.

Uterine Fibroid Embolization

With MTV IR's Uterine Fibroid Embolization or UFE, you can avoid the risk of invasive surgeries like a hysterectomy or myomectomy, avoid the lengthy recovery, and keep your uterus intact for any future pregnancies.

Prostate Artery Embolization

The Dallas experts of embolization offer patients a safe, painless, non-surgical treatment for BPH. The procedure accesses the prostate through an artery in your leg and wrist. It treats the entire prostate, by blocking blood flow and shrinking the gland.
